Level 3 — Hard Minimum (H) — functionsandpointers

Write a function `int findMin(int *arr, int n)` that finds the minimum element in an array using pointers.

Sample Input:

Enter the size of the array: 5

Enter the elements of the array: 10 20 5 30 15

Sample Output:

Minimum element is 5

Your Code

```
1 #include<stdio.h>
2 int findMin(int *arr, int n){
3     int min=*arr;
4     for(int i=1; i<n; i++){
5         if (*(arr+i)<min){
6             min=*(arr+i);
7         }
8     }
9     return min;
10 }
11 int main() {
12     int n;
13     // printf("enter the size of the array: ");
14     scanf("%d", &n);
15     int arr[n];
16     //printf("enter the elements in the array :");
17     for (int i=0; i<n; i++){
18         scanf("%d", &arr[i]);
19     }
20     int result=findMin(arr, n);
21     printf("\nMinimum element is %d\n", result);
22     return 0;
23 }
```

Program Input (stdin)

Enter input if required...

Output

Minimum element is 5

Level 3 — Hard UniqueElements (H) — function

Write a function void findUniqueElements(int arr[], int n, int unique[], int *uniqueCount) that finds all unique elements in an array arr of size n and stores them in unique.

Sample Input:

Enter the size of the array: 6

Enter the elements of the array: 1 2 2 3 4 4

Sample Output:

Unique elements are: 1 3

Your Code

```
1 #include<stdio.h>
2 void findUniqueElements(int arr[],int n,int unique[],int *
3     *uniqueCount=0;
4     for (int i=0;i<n;i++){
5         int count=0;
6         for (int j=0;j<n;j++){
7             if (arr[i]==arr[j]){
8                 count++;
9             }
10            if (count==1){
11                unique[*uniqueCount]=arr[i];
12                (*uniqueCount)++;
13            }
14        }
15    }
16    int main(){
17        int n;
18        //printf("Enter the size of the array: ");
19        scanf("%d",&n);
20        int arr[n];
21        //printf("Enter the elements of the array: ");
22        for (int i = 0; i < n; i++) {
23            scanf("%d",&arr[i]);
24        }
25        int unique[n];int uniqueCount;
26        findUniqueElements(arr, n, unique, &uniqueCount);
27        printf("Unique elements are: ");
28        for (int i = 0; i < uniqueCount; i++){ printf("%d ", u
29        )printf("\n");
30        return 0;
31    }
```

Program Input (stdin)

Enter input if required...

Output

Unique elements are: 1 3
